

GRIN2B is the name of a gene in a person's DNA. It is one of several genes responsible for sending and receiving messages in the brain. When a person is born with a GRIN2B variation, it is harder for the brain to send those messages

People with GRIN2B can be lots of fun and are interested in a wide range of activities such as

Playing with friends
Swimming
Listening to music
Learning new things

Most individuals with a GRIN2B variation can have a range of symptoms including:

Intellectual Disability
Alternative Communication
Low Muscle Tone
Gross & Fine Motor Disabilities

How can you help your friend with GRIN2B?

- Say "hello" and smile!
- Be patient with your friend
- Keep games and instructions simple
- Repeat yourself and give reminders
- Encourage your friend in things that are hard for them
- Ask for help if you can't understand your friend
